

Document production is increasing years after years and questions are raising:

- How to integrate document producers and document delivery,
- How to monitor the printing costs,
- How to evaluate impact of printing environment change,
- How to effectively manage the costs of the documents delivery

Your solution: XPRINT suite

- Increase user productivity,
- Reduce IT management costs,
- Save administrators, operators and users time,
- Protect existing IT environment,
- Make easier management of printing domain

That is what the XPRINT suite brings easily at your enterprise in the day-to-day activities.

The XPRINT suite is really a family of multi platform products providing:

- A powerful system for centralized and distributed printing,
- A corporate wide service based on a distributed system managing multiple output sites,
- An opened and integrated product family,
- A high availability service in output document delivery,
- A customizable product family allowing to easily be adapted to the your requirements.

Furthermore the XPRINT suite's roll-out in your IT environment brings a lot of answers to your needs:

- How easy your SAP printing environment is optimized?
- How document delivery integrates confidentiality and mobility?
- How the management of your printing environment reduces your total printing costs?

Those are raising questions

regarding the evolution of your printing environment and its increasing amount of document production (internal and external).

- How easy your SAP printing environment is optimized?

Is my job printed? Why not? Is that printer ready? I need my job urgently ... I don't get my output, I print it again ... Some reactions that you have surely heard in that context.

An easy integration of SAP and XPRINT components improves the delivery, tracking and control of documents and reports.

SAP End-users and operators manage through their SAP interfaces their requests and output devices. XPRINT suite enhances the basic printing functions available in SAP and improves the business performances. XPRINT is SAP certified.

Benefits:

- Improve the delivery of business critical documents and reports
- increase the accuracy and reliability of document delivery
- Increase the productivity of the users
- increase the robustness of the printing services
- Optimize the printing environment.

- How the management of your printing environment reduces your total printing costs?

- How many jobs have been printed this month?
- How many pages have been printed last week?
- Are some printers overloaded or not used?
- Who has printed what and when?

These are raising questions you need the answer to manage all the printing costs; it is also important to know it if you want to evaluate any change in your printing environment.

XPRINT suite combination allows you to get an answer to those questions and more ... A web interface allows to get all the information you need. So you will be able to show statistics about your printing environment use. The views can be very easily customized or extended to answer to your specific requirements.

Benefits

- Increase printing costs transparency
- Show printing cost distribution
- Basis for printing environment change planning
- Control of printing rules definition
- Rationalization of printing environment

Key advantages of XPRINT

- SAP NetWeaver-certified OMS interface, to facilitate the distribution and control of SAP output,
- A flexible usage model, to 'centralise and print', to 'distribute and print', or use this software with any other model,
- Central point of administration, with a full range

- of security privilege classes,
- Domain Monitoring through a web graphical interface, helpful for any help desk activities.

-How to print from an iOS device like iPad or iPhone to XPRINT devices?

- How can I print from my iPad to that devices?
- Is it possible to print from my iPhone to that printer?
- Are those printers accessible from my iPad?

People are more and more working on their iPad. But when they need to print their preparation whatever it is they need a printer supporting AirPrint protocol or to transfer their presentation to someone able to print it for them.

XPRINT suite (MyMobile Print) allows you to get access to the printing environment even if the printers are not supporting the AirPrint protocol.

On the iOS device, the user gets the list of available printers and make his choice. The request is then submits to XPRINT which manages its printing.

Benefits

- Increase access of existing printing environment for new technology
- Increase flexibility
- Optimize printing environment
